

Wearable Safety and Experience Check

One copy per wearable project; mentor and student inspect together.

Team members: _____

Date: _____

Inspect together	PASS	FIX	DISPLAY ONLY	Evidence / action
Power source secure, accessible, cool, and removable				
Conductive paths covered; no loose strands or short-circuit risk				
Needles and temporary sharp tools fully removed and counted				
Controller, LEDs, and wiring protected from pull and movement				
Comfort and fit checked with safe motion; no pinching or hot spots				
Main interaction can be explained and safely turned off				
Visitor touch point and mentor supervision are clear				
Display-only version still communicates the project's idea				

Release decision

Circle one: PASS FOR WEAR / FIX BEFORE RECHECK / DISPLAY ONLY. Mentor initials _____ Student initials _____

Robotics Safety and Experience Check

One copy per robotics project; verify safe motion, repeatability, and control.

Team members: _____

Date: _____

Inspect together	PASS	FIX	MODIFIED DEMO	Evidence / action
Base and moving parts secured; reach and pinch zones marked				
Batteries, terminals, and wires protected and accessible to mentor				
Servo/motor limits do not strain, buzz, stall, or strike objects				
Correct device connects reliably; wrong-device risk is controlled				
Input threshold works in the actual Gala placement and lighting				
Outputs stop and reset safely when condition is false				
Visitor boundary, touch point, and stop control are clear				
Modified demo still proves the central interaction safely				

Release decision

Circle one: PASS FOR LIVE DEMO / FIX BEFORE RECHECK / MODIFIED DEMO. Mentor initials _____ Team initials _____

Two-Trial Reliability and Safe Backup

Run in the real setup. A safe backup is part of good engineering, not a failure.

Team members: _____

Date: _____

What a visitor will do and experience

In one sentence: A visitor will _____ and the project will _____.

Real-setup trial	Starting condition	Visitor action / input	Observed response	Reset safe?	Pass?
1				Y / N	Y / N
2				Y / N	Y / N

Known failure or uncertainty

If _____ happens, stop / reset / ask a mentor by...

Safe backup experience

Without unsafe improvising, visitors can still understand or experience the idea through...

Backup pieces ready

Location / owner

Photo, video, storyboard, sample, or manual demonstration

Sign or exact words explaining the modified experience

Mentor release

Circle one: LIVE EXPERIENCE / MODIFIED EXPERIENCE / DISPLAY ONLY / HOLD FOR REPAIR. Initials _____

Project Story Card

Write for a visitor: large, brief, human, and free of unexplained technical words.

PROJECT TITLE

Short enough to read from a few feet away.

WE IMAGINED...

What future, need, delight, or question inspired the project?

TRY / NOTICE...

What may a visitor safely do? What response should they notice?

THE ENGINEERING IDEA...

Explain the input, decision, circuit, code, structure, or output in plain language.

WE LEARNED...

One test, change, surprise, or repair that made the project stronger.

Creators: _____

Pathway: Wearables / Robotics

Setup, Packdown, and Transport Tag

Keep the upper checklist with the project bin; cut and attach the lower tag.

Team members: _____

Date: _____

SETUP ORDER	Person / note	PACKDOWN ORDER	Person / note
1. Place base/display and mark visitor boundary		1. Stop interaction and power off	
2. Secure hardware/wearable and inspect damage		2. Remove/secure battery and power source	
3. Connect only labeled prepared power/device		3. Count tools, sharps, controllers, loose parts	
4. Run one real-placement safety trial		4. Save evidence; label repair/inspect items	
5. Place story card, backup, and stop instructions		5. Pack in labeled order and sign transport tag	

CUT-APART PROJECT TRANSPORT TAG

Project / pathway: _____

Bin / case number: _____ Stored at: _____

Power source removed or secured by: _____

Fragile / moving / sharp / inspect notes: _____

Setup first action: _____

Adult release out: _____ Adult receipt in: _____
