

Start Small, Test Three Times

Front - a five-minute team huddle before tools, code, or materials move.

Project/team: _____

Workday: _____

Today's smallest useful goal

By the end of this work block, we will be able to show...

Good enough is observable

What will a person see, hear, measure, or repeat?

Stop condition

When do we stop, power down, or ask a mentor?

Role for this test	Person	What they protect
Builder / hardware guardian		Safe connections, movement, count
Coder / settings guardian		One controlled change
Tester / evidence lead		Same condition, honest record

Three controlled trials

Trial	Condition we kept the same	Prediction	What happened / measured	Pass?
1				Y / N
2				Y / N
3				Y / N

The pattern we see

Across the three trials, the evidence suggests...

Change One Thing, Then Close Safely

Back - use evidence to choose the next move and leave a clean restart.

One variable we will change

We will change only _____ because our evidence suggests...

What stays the same

Same test condition, code, placement, power, timing, or material.

Retest result

Better / same / worse / new problem - and what proves it?

Evidence saved	Filename / location / person responsible
Photo or short video	
Code / settings / measurement	
Design note or labeled sketch	

Safe close before the team leaves

Check	Done / note	Check	Done / note
Power off / battery safe		Needles, tools, loose parts counted	
Moving parts parked		Damaged or uncertain item labeled	
Files named and saved		Work stored for a clean restart	

Next five-minute action

When we return, the first person will _____ using _____.

Mentor conversation - circle one	What must be true next time?
READY TO CONTINUE / REPAIR FIRST / MENTOR HOLD / READY TO SHARE
