

What I Can Make Happen

Side 1 of the capability passport - carry this through the four studios.

Name: _____

Date: _____

How to use this passport

Try it, notice what happened, and show or explain one piece of evidence. A truthful 'not yet' helps us plan support.

1. Future Stamp - an idea can become a visible mark

☐ I tried it ☐ I can show it ☐ I want more practice

My future statement

Complete: In the future, I will use my ideas to...

One design choice I made

Shape, word, symbol, size, or placement.

Evidence I can point to

The printed mark, a test impression, or a change I made.

2. Circuit Lab - a complete path makes light

☐ I made a complete path ☐ LED lit ☐ I found a break

Draw the path

Show battery +, conductive thread/tape, LED direction, and battery -.

What changed when I tested?

Circle or note: direction / contact / loose path / short circuit.

Quick safety check

Battery stayed cool; power was removed before changing the path; needle and snips returned to the counted tray.

Inputs, Code, and Light Patterns

Side 2 of the capability passport - explain what caused what.

Name: _____

Date: _____

3. micro:bit - an input can trigger a response

☐ Program ran ☐ Input worked ☐ I changed one thing

I did...	The micro:bit did...	The block/code that caused it was...
Pressed A / pressed B / shook / other		
Changed one block or value		

My IF / THEN explanation

IF I _____, THEN the micro:bit _____.

4. NeoPixel - code controls color, order, and timing

☐ Pixels lit ☐ Pattern changed ☐ I safely reset

Pattern I tested	One variable I changed	What I noticed
Color / brightness / number / order / timing		
My second test		

Carry forward

Star one capability you may use in a project: visible symbol / sewn circuit / physical input / programmed light pattern. Be ready to tell a mentor why.

Three Fast Ideas, Then Combine

Sketch to think. These are possibilities, not promises or polished art.

Name: _____

Date: _____

Future statement or message

What do you want someone to notice, feel, understand, or do?

Make three noticeably different possibilities

1

It responds when...

2

It responds when...

3

It responds when...

Circle one idea - or combine parts

I am choosing idea(s) _____ because the technology helps the message by...

Capability I might use	What it would do for the person wearing or viewing it
Stamp / circuit / micro:bit / NeoPixel	
A second capability, if useful	

Studio rule

A smaller idea that works safely is stronger than a crowded idea that cannot be tested.

Map the Wearable Before Building

Use simple labels and arrows. Your mentor conversation matters more than drawing skill.

Name: _____

Date: _____

Placement map

Shirt - front and inside

Draw outside view. Use a dotted line for battery, thread, or controller on the inside.

Hat or alternate wearable - outside and inside

Show where a person touches, sees, hears, or safely carries each part.

When this happens...	The wearable will...	So the audience understands/feels...
Input, movement, button, time, or viewing	Light, symbol, pattern, or other output	

First prototype question

What is the smallest test that would teach you something important?

Mentor conversation - not a score	Circle or note
I can explain the message and what the technology does.	clear / talk again
My placement protects comfort, movement, and battery access.	safe start / revise
My first test is small enough to finish and learn from.	ready / make smaller
