

W1

WEARABLES

Mentor: Jennifer / 6 students in 3 pairs

This is your home table. Follow your mentor; there is no station rotation.

YOUR ACTIVITY SEQUENCE

1. Sew one LED circuit

Share one felt practice set per pair. Both partners practice stitches and pad connections.

2. Program a micro:bit

Use your W board and laptop. A = heart, B = happy, A+B = clear. Both partners take a turn.

3. Test + improve

Change a symbol for a real user. Test A, B, and A+B. Save code and record the actual result.

4. Share + design

Draw a paper symbol and observe the NeoPixel preview. Each student develops three ideas and a shirt-and-hat proposal.

5. Save + close

Save your own evidence and reflection. At 2:21, remove power, return needles, count, and store.

SAFETY + ROLES

Battery out while sewing.

Keep + and - stitch paths apart.

Mentor checks before power.

Keep coin cells in the mentor tray until your circuit is released.

Needle in hand or counted tray.

Return it before breaks and coding.

Heat or odor?

Stop and tell a mentor.

Share practice equipment. Your final shirt-and-hat proposal is individual.

SNACK 9:25-9:38 LUNCH 12:42-1:12 CLEANUP 2:21-2:41

R1

ROBOTICS

Mentor: Stephanie / 6 students in 3 pairs

This is your home table. Follow your mentor; there is no station rotation.

YOUR ACTIVITY SEQUENCE

1. Connect + identify

Use your assigned Hummingbird Bit kit and iPad. Check the full device name and the safe reset.

2. Explore + program

Read the input your mentor prepared. Control two outputs. Movement requires mentor release.

3. Test + improve

Run three trials. Change one thing and retest. Swap Driver and Navigator after each challenge.

4. Share + design

Join the paper-symbol and NeoPixel preview. Develop three ideas and a shared robot proposal.

5. Save + close

Save code, results, and both reflections. At 2:21, reset safely, power off, count, and store.

SAFETY + ROLES

One numbered kit per pair.

Keep the kit at this table.

Power off before wiring changes.

Ask a mentor to make the change.

R boards stay in Robotics.

Do not load MakeCode on them.

Unexpected motion, heat, or odor?

Stop, power off, and tell a mentor.

Two LEDs are the fallback. If no servo was tested, record motion as deferred.
